

Mauritania Technology Fosters Tradition (TFT)

**Presentation at the Environmental Trends
Analysis (ETA) workshop, organized by
FRAME and USAID**

Santiago, Chile, 6 Nov 2006

**Lars T. Soeftestad
Supras Consult, Norway**

CONTENT

1. Presentation of TFT
2. Analytical framework
3. Drivers and trends
4. Property and use rights
5. Methodology
6. Data and maps
7. Conclusions

1. Presentation of TFT

- Environment
 - Semi desert and ephemeral wetlands
 - 400 mm precipitation isohyet moves south
- People
 - Maure, Haratins/Black Maure, black Africans
- Objective
 - Document and formalize trad. property rights, with local people and using GIS

Scoping: problem areas identified

- Environmental destruction
- Increase in conflicts between farmers and pastoralists
- Weakened position of tribes
- All collective property rights abolished
- State and public sector do not realize present problems

Stakeholders and scales

Users and beneficiaries at various scales:

Global - Donors, Law com., Sahel countries

National - Govt., Public sector

Regional - Courts, Regional adm.

Local - Farmers, Herders, Trad. leaders

SC

Output

- Body of trad. knowledge pertaining to natural resource management, in local languages. In print and on the Internet
- Maps of resource use patterns
- Institutional and legal reform
- Increased stakeholder involvement
- Decrease in the amount of conflicts

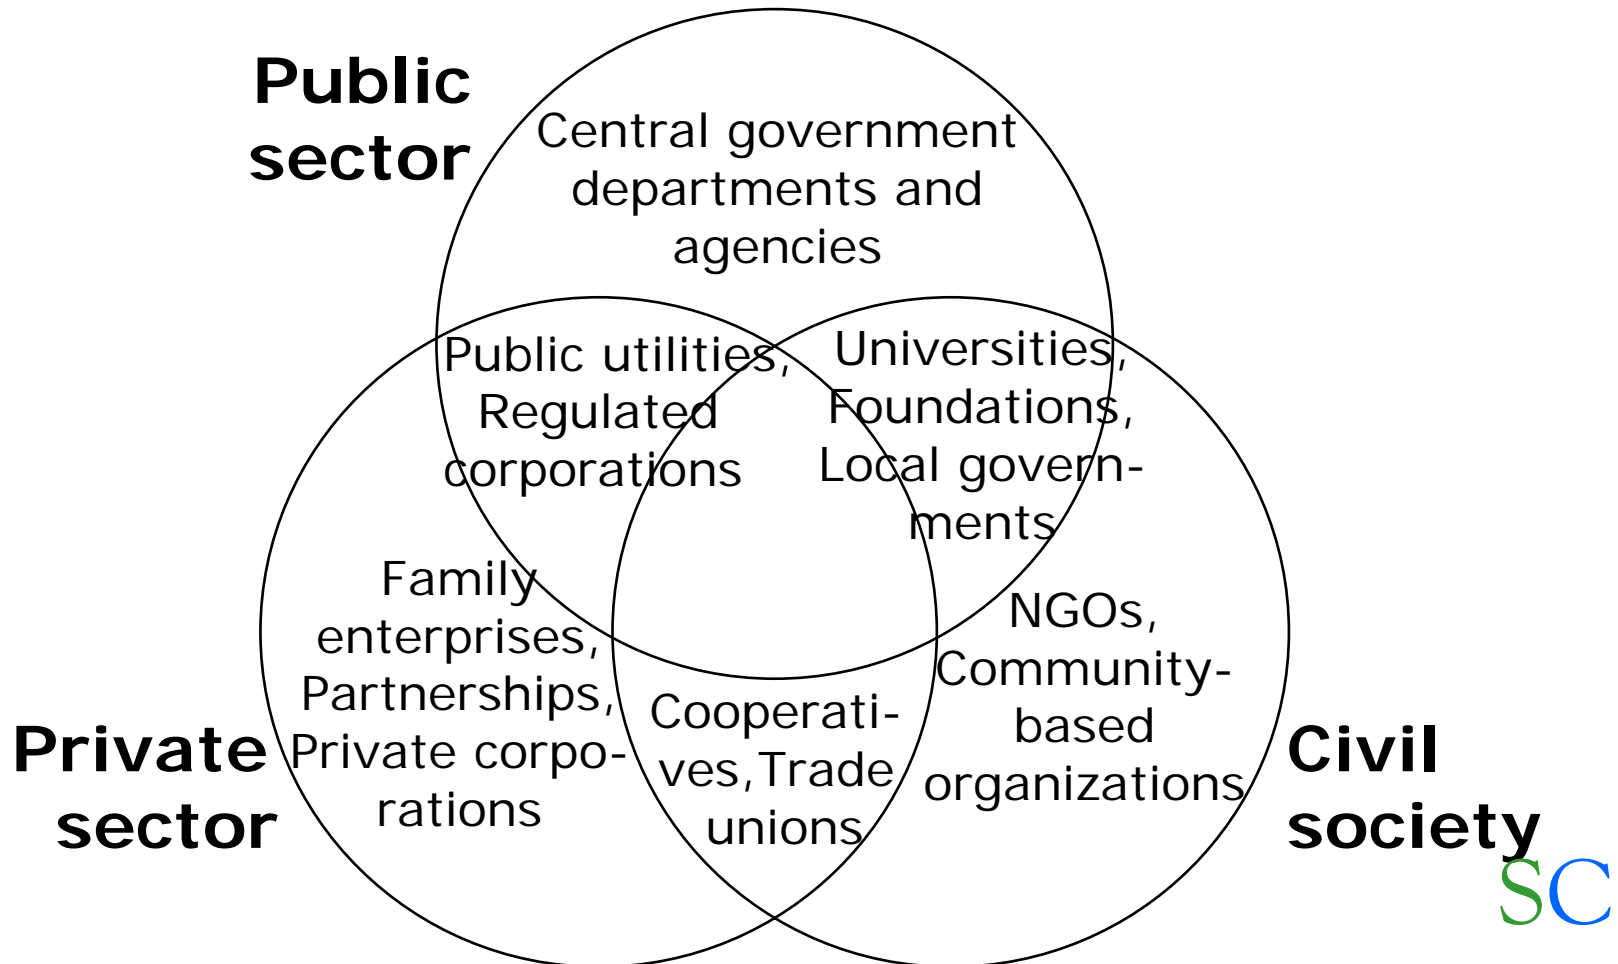

2. Analytical framework

Key elements:

- Stakeholders and power
- Law and legal paradigms
- Cultures and knowledge systems
- Knowledge and knowledge management

Societal sectors and stakeholders

Power and empowerment

How to address power – and achieve empowerment – follows from the methodological approaches chosen:

- Ethics - knowledge be used by whom and for what?
- Consensus-building, Consultation, Governance, Involvement, Participation, Transparency, etc.
- Trad. knowledge as means and goal
- Scaling of knowledge, bottoms-up approach

Institutions and institutional analysis

- Understood both as organizations and in the sense of institutional economics
- Facilitates and constrains the flow of knowledge and data between scales
- Important for understanding and assessing power and empowerment

Law and legal paradigms

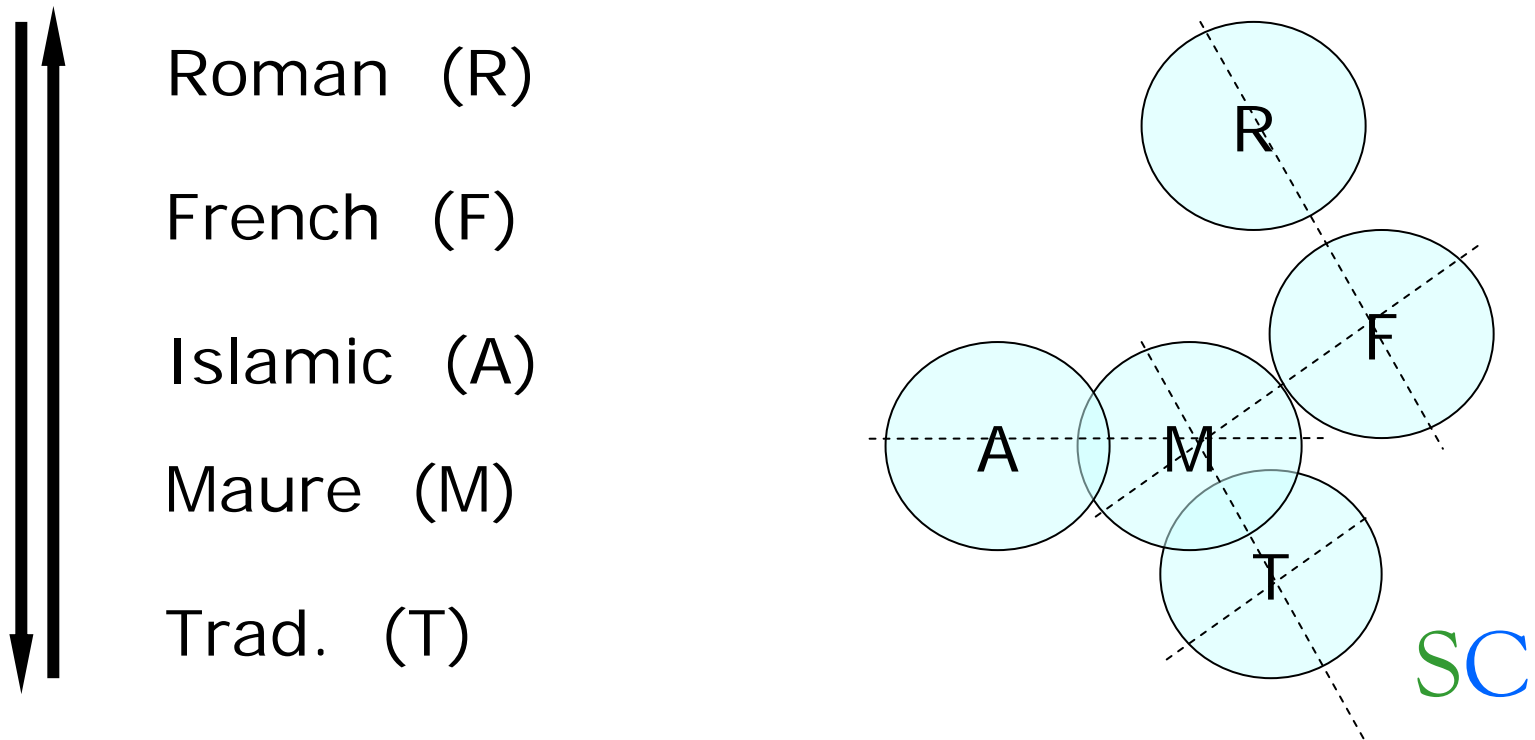

Legal paradigms

- Traditional (tribal) law
- Islamic law
- French law
- Legal pluralism
- Problems of application and coexistence

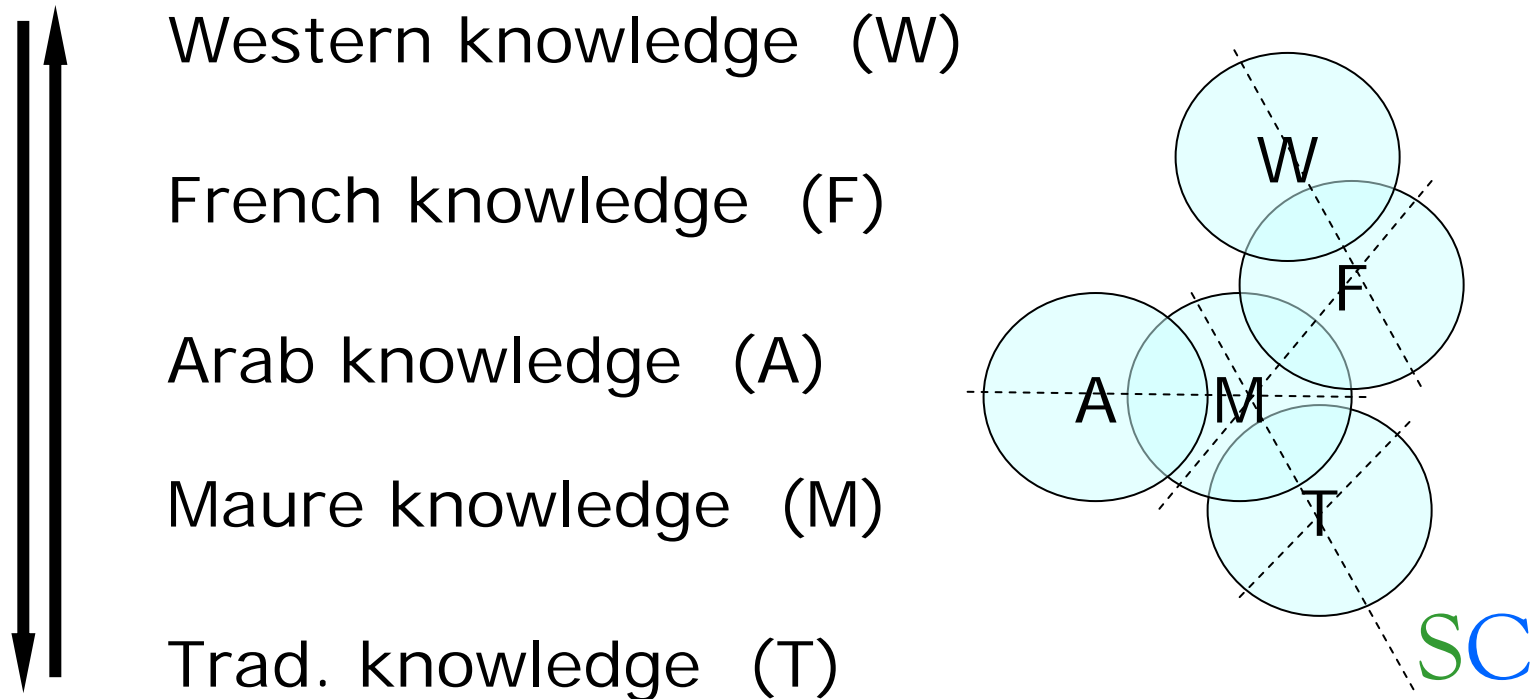

Legal paradigms in Mauritania

Legal paradigms and relations:

Knowledge systems in Mauritania

Knowledge systems and relations:

What is knowledge, 1?

- Sum total of a culture's accumulated experience, including transfer, views on itself, the environment, and relationships with the environment
- Knowledge and culture
 - Knowledge is part and parcel of culture

What is knowledge, 2?

Relations between knowledge, culture and epistemology:

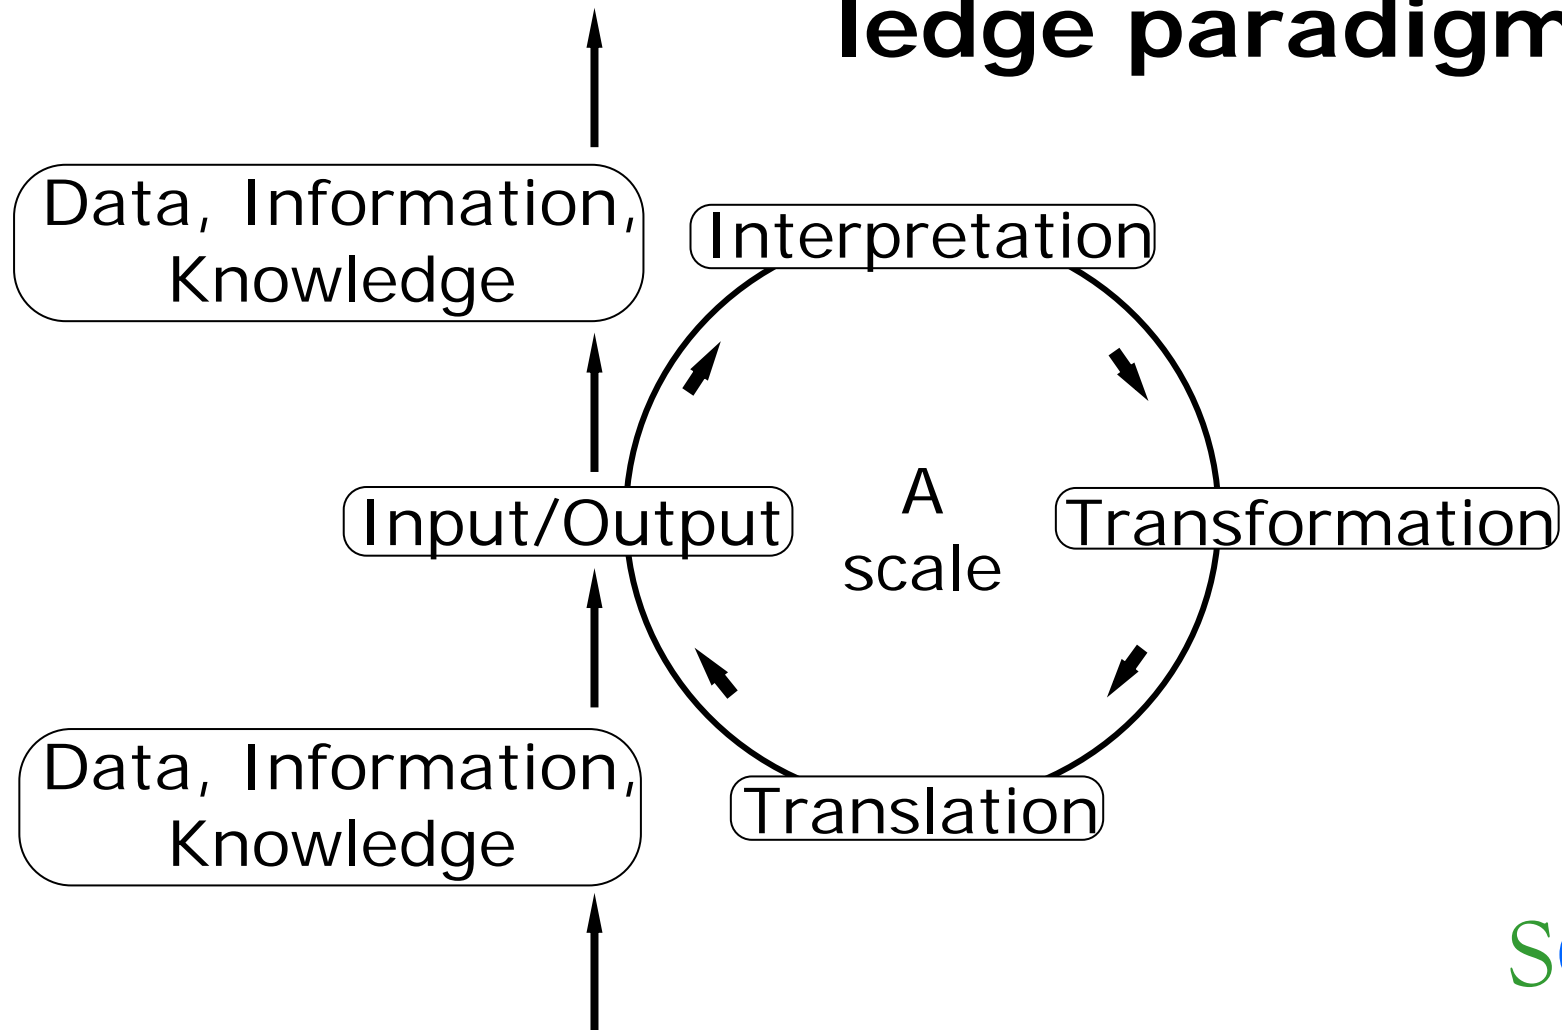

Knowledge management

Aspects of managing knowledge within and between scales:

- Dimensions
 - With whom to share, What to share, How to share
- Tasks
 - Collection, Evaluation, Categorization, Storage, Retrieval, Dissemination, Production of new knowledge

SC

Scaling legal and knowledge paradigms

3. Drivers and trends

- Drivers and trends interact, and operate within and between the interacting natural and social systems, at several levels
- Causalities between the trends are very complex
- The drivers are:
 - Population increase
 - Desertification

SC

Trends, I

The trends are:

- Ecological system under stress
- Deforestation
- Decentralization and role of the State
- Diminishing role of traditional law
- Privatization
 - Land (fencing)
 - Water (dams, access to wells)
- Changes in production systems

SC

Trends, II

- Absentee pastoralism/agriculture
- Sedentarization
- Increase in valuation of land
- Infrastructure developments
- Increase in conflicts
- Increased focus on biodiversity
 - RAMSAR

4. Property and use rights

The property rights system to be understood through the role of pastoralism in history:

- Reciprocal adaptation between pastoralism and environment
- Immigration, wars and rulers
- The French colonial legacy

Characteristics

- A system well adapted to the specific characteristic of the local ecosystems
- Emphasis on making resources available to those that need it
- A non-equilibrium system
 - Availability of water – when, where, how long, and how much determine the operation and productivity of the system

Systemic changes

- The trad. property rights system was a common property system for the original users
- Lack of a fit between the trad. system and today's situation is growing
- Today's situation can be characterized as open access

5. Methodology

- Participatory Research Mapping (PRM)
 - Local people help identify research issues and collect data
- Mix of qual and quant
 - Focus groups, Interviews, Surveys, GIS/GPS, Satellite imagery

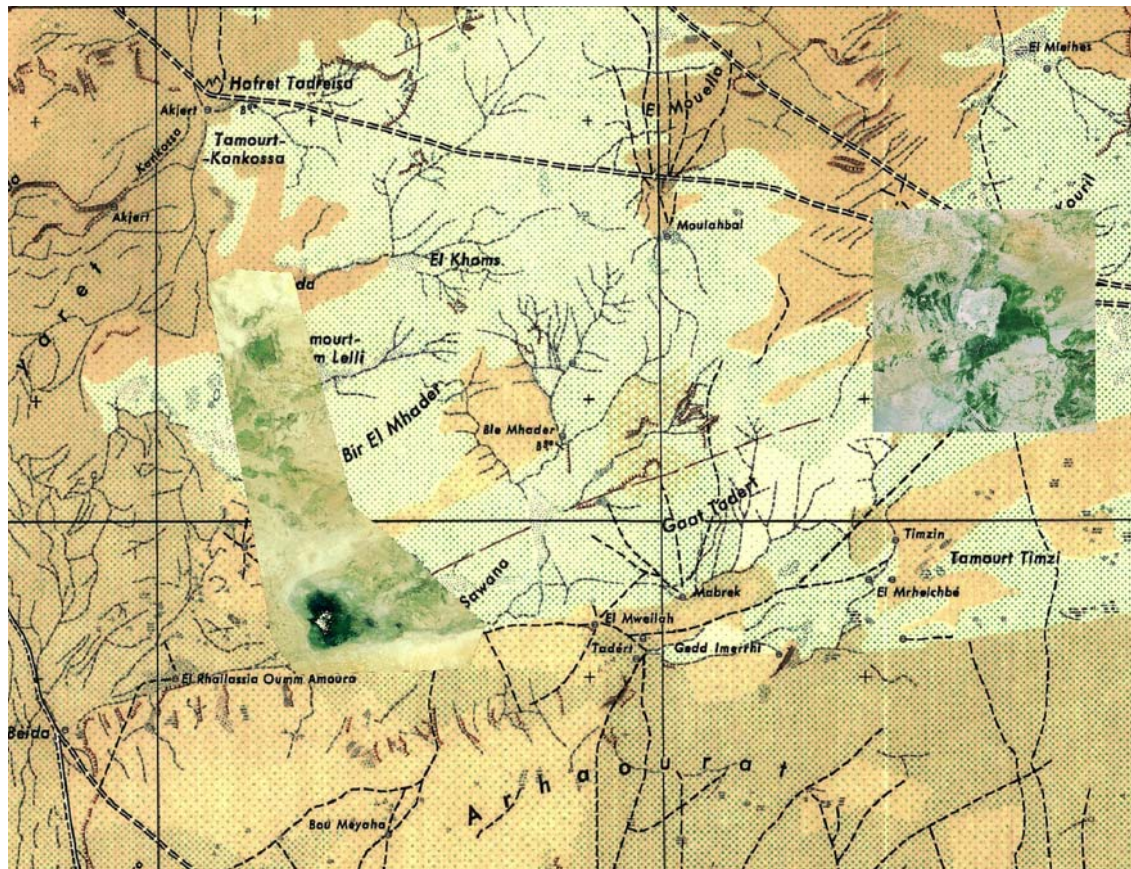

6. Data and maps

Data include:

- Satellite imagery (Quickbird)
 - Digital pansharpned color images, 0.6 m res.
- Survey data:
 - Socio-economics, incl. productive activities in agriculture, pastoralism, hunting and gathering
 - Toponymy
 - Resource use - What, Whom, When, Where, Why, How

7. Conclusions

Issues and concerns

- Methodological critique: capacity building, learning, reliability, validity, GPS
- Stakeholder relations
- National level: transparency, ownership priorities, and public sector situation
- Conflicts and conflict management
- Power and empowerment

Next steps

- Data analysis
 - Quant – resource use patterns
 - Qual – conflict: causes and implications
- Prepare maps
- Build collaboration, locally and internationally
- Extend partnerships, international
- Further data collection: time series data
